VCOM 7.0 HARVEST & APPLY

INCREASE HERBICIDE APPLICATION YIELD IN SUGARCANE

* This computer is upgradeable to all our PF solutions

Pre-emergent herbicide application, monitoring of harvest and auto-steer guidance integrated into the same system. Optimize operational times by performing two tasks in one single working pass.

DESCRIPTION OF THE CONCEPT

The conventional system of weed control in sugar cane is based on several post-emerging applications of products with low residuality, which is time and budget consuming due to the high cost of inputs such as herbicides and fuel.

The Harvest & apply System allows you to immediately apply a pre-emergent herbicide with high residuality on the clean field surface before the sugarcane leaves from the harvester fall down, which retains the herbicide and humidity in the field.

GPS OPTIONS ACCORDING TO YOUR NEEDS

LCGPS: GPS/Glonass L1 10 Hz
Pass-to-pass accuracy 30 cm*
*See catalogue LCGPS

AG-STAR: GPS/Glonass L1 10 Hz
Pass-to-pass accuracy 20 cm*
*See catalogue AG-Star

SMART6-L: GPS/Glonass L1/L2 20 HZ /
Terrastar-c option.
Pass-to-pass accuracy 3-5 cm*
*See catalogue SMART 6-L

FEATURES

Shows the spray coming from the application toolbar.

Rear barrier prevents air turbulence affecting an even application.

Superior barrier prevents the fall of panicle altering the application.

BENEFITS OF HARVEST & APPLY

EARLY APPLICATION:
PRE-EMERGENT

GREATER USE
OF MACHINERY

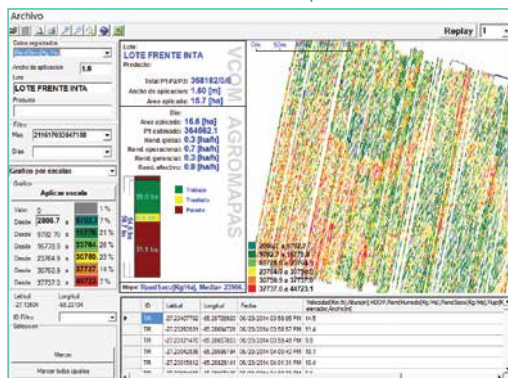

EARLY PLANNING

LONGER CONTROL

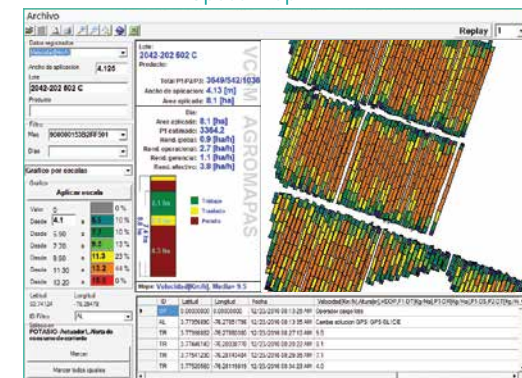

MAPS AND WORK LOG

The system generates georeferenced maps that allow you to have a detailed record of the operator's work. While operating, it stores such data as date, starting and finishing working times, alarm location, speed, hectares, terrain elevation, applied and no-spray area. Our Agromaps Software generates reports and post-application maps of all registered variables, which enables you to visualize and analyze all these data, hence allowing for better decision-making.
